

AMENDMENTS TO THE CLAIMS:

Please cancel claims 43 and 49, without prejudice, and amend claims 34, 42, 44, 45, 50 and 51 as shown below.

This listing of claims will replace all prior versions and listings of claims in the Application:

Claims 1-33 (cancelled)

Claim 34 (currently amended): A light fitting having a front and a rear, the light fitting having a support surround and a front facia, and a facia retainer for holding the front facia in position in the support surround, the facia retainer being resilient for enabling removal thereof from an installed position at the front of the light fitting by a generally translational movement, the light fitting further having a lamp retainer and a lamp wherein the lamp is retained by the lamp retainer, the front facia having a rear side and a front side, the front side of the facia being flush with a front surface of the support surround when in an installed position, the lamp being resiliently biased toward the rear side of the front facia such that the lamp may be moved backwards away from a recessed ledge of the rear side of the front facia to enable a finger or a tool to be engaged behind the ledge to facilitate removal of the front facia from the support surround, wherein the facia retainer comprises at least one spring clip, and wherein the front facia is attached by the facia retainer to an intermediate member, the intermediate member being attached to the support surround.

Claim 35 (previously presented): A light fitting as claimed in claim 34 in which the lamp retainer forms the front facia.

Claim 36 (previously presented): A light fitting as claimed in claim 34 in which the lamp retainer comprises a tube extending axially in front of the lamp.

Claim 37 (previously presented): A light fitting as claimed in claim 34 in which the front facia has a non-circular cross-section.

Claim 38 (previously presented): A light fitting as claimed in claim 37 in which the cross-section is a regular polygon.

Claim 39 (previously presented): A light fitting as claimed in claim 37 in which the cross-section is hexagonal.

Claim 40 (previously presented): A light fitting as claimed in claim 37 in which the cross-section is square.

Claim 41 (previously presented): A light fitting as claimed in claim 34 in which the support surround includes at least one spring arm for holding the light fitting in place on a layer of building material.

Claim 42 (currently amended): A light fitting having a front and a rear, the light fitting having a support surround and a front facia, and a facia retainer for holding the front facia in position in the support surround, the facia retainer being resilient for enabling removal thereof from an installed position at the front of the light fitting by a generally translational movement, the light fitting further having a lamp retainer and a lamp wherein the lamp is retained by the lamp retainer, the front facia having a rear side and a front side, the front side of the facia being flush with a front surface of the support surround when in an installed position, the lamp being resiliently biased toward the rear side of the front facia such that the lamp may be moved backwards away from a recessed ledge of the rear side of the front facia to enable a finger or a tool to be engaged behind the ledge to facilitate removal of the front facia from the support surround, as claimed in claim 34 in which wherein the front facia is directly retained by the

facia retainer to the support surround[[.]], and wherein the facia retainer comprises at least one spring clip.

Claim 43 (canceled).

Claim 44 (currently amended): A light fitting as claimed in claim [[43]] 34 in which the intermediate member is pivotally coupled to the support surround.

Claim 45 (currently amended): A light fitting as claimed in claim [[43]] 34 in which the intermediate member has a non-circular section.

Claim 46 (previously presented): A light fitting as claimed in claim 45 in which the cross-section of the intermediate member is a regular polygon.

Claim 47 (previously presented): A light fitting as claimed in claim 46 in which the cross-section of the intermediate member is hexagonal.

Claim 48 (previously presented): A light fitting as claimed in claim 45 in which the cross-section of the intermediate member is square.

Claim 49 (cancelled)

Claim 50 (currently amended): A light fitting as claimed in claim [[49]] 34 in which a pair of said spring clips is provided, located on opposed sides of the light fitting.

Claim 51 (currently amended): A light fitting as claimed in claim [[49]] 34 in which each spring clip is secured to the front facia.

Claim 52 (previously presented): A light fitting as claimed in claim 34 in which the resilient biasing for biasing the lamp towards the front facia is provided by a spring.

Claim 53 (previously presented): A light fitting as claimed in claim 52 in which the spring is a helical spring.

Claim 54 (previously presented): A light fitting as claimed in claim 52 in which two said springs are provided, each extending from an end of the lamp opposite a lens end thereof to the lamp retainer.

Claim 55 (previously presented): A light fitting as claimed in claim 54 in which each spring extends from an electrical connector to the lamp retainer.

Claim 56 (previously presented): A light fitting as claimed in claim 34 in which the facia includes a recessed ledge for engaging the perimeter of a lamp.

Claim 57 (previously presented): A light fitting as claimed in claim 34 which includes a lamp, the lamp having a flat front surface.

Claim 58 (previously presented): A light fitting as claimed in claim 34 which comprises a downlighter.
